

Graduate Mechanical Engineer Vacancy

Principal Duties and Responsibilities:

- Development & modification of mechanical services design to coordinate with building structure and rationalise pipe, duct and containment routes.
- Ensure design complies with project specifications.
- Ensure any design problems are identified at an early stage and work with client / main contractor to resolve.
- Ensure materials are approved and in compliance with client's specification.
- Complete all checklists and documentation
- Ensure documentation is completed in compliance with project requirements.
- Work closely with the project manager to ensure procurement cost targets are achieved.
- Drive onsite operatives and subcontractors to achieve the construction programme.
- Ensure installations are in full compliance with the client quality objectives.
- Ensuring ASME BPE standards are adhered to at all times
- Knowledge of ASTM A380-06 / ASTM A967-05 Passivation Standards
- Working to ISO 9001 and 14001 as well as OHSAS18001 accreditation standards.

Person Specification:

The successful graduate will possess excellent communication and interpersonal skills with a keen willingness to learn. A third level engineering qualification with a knowledge of ASME BPE, GTAW Orbital Welding, Inspection & Passivation Procedures. Must be able to use MS Suite including MS Project. AutoCAD experience an advantage. This is such an excellent opportunity for any graduate you must be a self-starter who can take direction and work to the highest quality and safety standards whilst maintaining a client focused commercial outlook.

Time and energy will be invested in the right person and the salary will be commensurate with a graduate post. Depending on the successful completion of the 2-year contract a distinct possibility for progression within the company exists.
